

Rithika Bhargav Khandavilli

Toronto, ON (PR) | +1 647 996 2250 | 101669607@georgebrown.ca | rithikabhargav@gmail.com

OBJECTIVE

To obtain a Machine Learning / Artificial Intelligence internship where I can apply industry experience in deep learning, software development, and data-driven AI solutions — together with advanced training from the Applied AI Solutions Development (T431) program at George Brown College — to build innovative, scalable, and impactful machine learning solutions.

HIGHLIGHTS OF QUALIFICATIONS

- Developed and deployed deep learning models using Python, TensorFlow, PyTorch, CNNs, transfer learning, CUDA, and TensorRT for real-time computer vision applications in production environments.
- Hands-on experience in machine learning pipelines, feature engineering, data preprocessing, ETL workflows, model evaluation, and hyperparameter tuning through the Applied AI Solutions Development (T431) program at George Brown College.
- Built end-to-end machine learning workflows covering data collection, ETL, exploratory data analysis (EDA), feature selection, model training, validation, optimization, and performance evaluation.
- Strong understanding of machine learning algorithms, deep learning, CNNs, computer vision, and data-centric AI, with the ability to translate theory into production-ready solutions.
- Proficient in SQL, MySQL, database design, and scalable data management, supporting reliable, secure, and high-quality datasets for AI and analytics applications.
- Collaborative and analytical problem solver experienced in cross-functional engineering teams; first-place Machine Learning Hackathon winner with published undergraduate research.

TECHNICAL SKILLS

Programming Languages: Python, C++, JavaScript, HTML, CSS

Machine Learning & AI: Deep Learning, Computer Vision, CNNs, Transfer Learning, TensorFlow, PyTorch, OpenCV, CUDA, TensorRT

Data Engineering: SQL, MySQL, Database Design, ETL

Development Tools: Visual Studio Code, Visual Studio, PyCharm, SAP

EDUCATION

Applied AI Solutions Development (T431) — Post-Graduate Diploma

May 2026 – Present

George Brown College, Toronto, ON

Relevant coursework and class projects:

- Designed end-to-end machine learning pipelines including ETL, preprocessing, feature engineering, model training, validation, and evaluation.
- Applied supervised machine learning algorithms and deep learning techniques to real-world classification and prediction problems.
- Performed exploratory data analysis (EDA), feature selection, hyperparameter tuning, and model performance evaluation using Python.
- Developed AI solutions following industry best practices in data preparation, experimentation, reproducibility, and deployment.

Bachelor of Technology in Computer Science | GPA: 7.65

Aug 2022

Dayananda Sagar Academy of Technology & Management, India

PROFESSIONAL EXPERIENCE

Financial Operations Specialist — Procom, Canada

Jun 2025 – Dec 2025

- Handled the end-to-end billing cycle including timesheet approvals, invoicing, and transaction processing using SAP.
- Coordinated with clients and internal teams to resolve billing inquiries and ensure timely payment processing.

- Maintained and updated SOPs to support efficient and compliant billing operations.

Machine Learning Model Developer (ADAS) — Cyient, India

Jul 2024 – Dec 2024

- Developed deep learning models for object detection and material volume assessment using automotive datasets.
- Integrated CNN and RNN architectures with ADAS systems using camera, LiDAR, and RADAR data.
- Built scalable model training pipelines using TensorFlow and PyTorch.

Database Developer — LTIMindtree, India

Jul 2022 – Dec 2023

- Designed and maintained secure, high-performance databases.
- Optimized database performance through monitoring and tuning activities.
- Managed migrations, security controls, and issue resolution.

INTERNSHIP AND PROJECTS

ML & AI Application Development — Tequed Labs

Jun 2020 – Jul 2020

- Developed a handwriting and digit recognition system using K-Nearest Neighbours (KNN).
- Implemented adaptive thresholding techniques for pixel-level recognition accuracy.

Detection of Artificially Moulded Fingerprints

- Developed a CNN-based system to detect fingerprint spoofing, ensuring accurate biometric authentication.
- Analysed finger characteristics to distinguish real fingerprints from artificially moulded ones.

Inventory Control System Using DBMS

- Developed an inventory management system for a departmental store to handle inventory details, updates, and report generation.
- Implemented CRUD operations (Create, Read, Update, Delete) for efficient inventory management; built using Apache, MySQL, and PHP with an HTML/CSS interface.

ACCOMPLISHMENTS

- Secured first place in a COVID-19 Prediction Hackathon organized by Tequed Labs.
- Demonstrated an Arduino-controlled firefighting robot at the Havells National Conference.
- Published a final-year project in IJCRT (International Journal of Creative Research Thoughts).
- Presented a project at the International Conference on Emerging Trends in Engineering.
- Volunteered at NCDRC cybersecurity workshops and awareness events.
